

LED CIRCUIT DESIGN PROJECT

Team 7

WHY WE CHOSE THE PROJECT

The LED Design project combines both circuitry and coding skills

The project will have a physical involvement with sautering and assembly

Our group has an electrical engineering major and a computer science major

ABOUT THE PROJECT

The group will be provided with an LED ring, a battery, and an Adafruit CPE component

The group will be tasked with displaying an original pattern on the LED ring

WHY WE ARE THE BEST FIT

We have both an electrical engineering major and a computer science major in the group

We all have a fascination with the project as a concept

Our project ideas are fantastic

PROJECT CONSTRAINTS

We will use an LED Ring attached to an Adafruit CPE and a battery

We will use Adafruit MakeCode software to program the CPE

We must program the circuit to flash a unique pattern on the LED ring

The program must contain no errors and go beyond the requirements

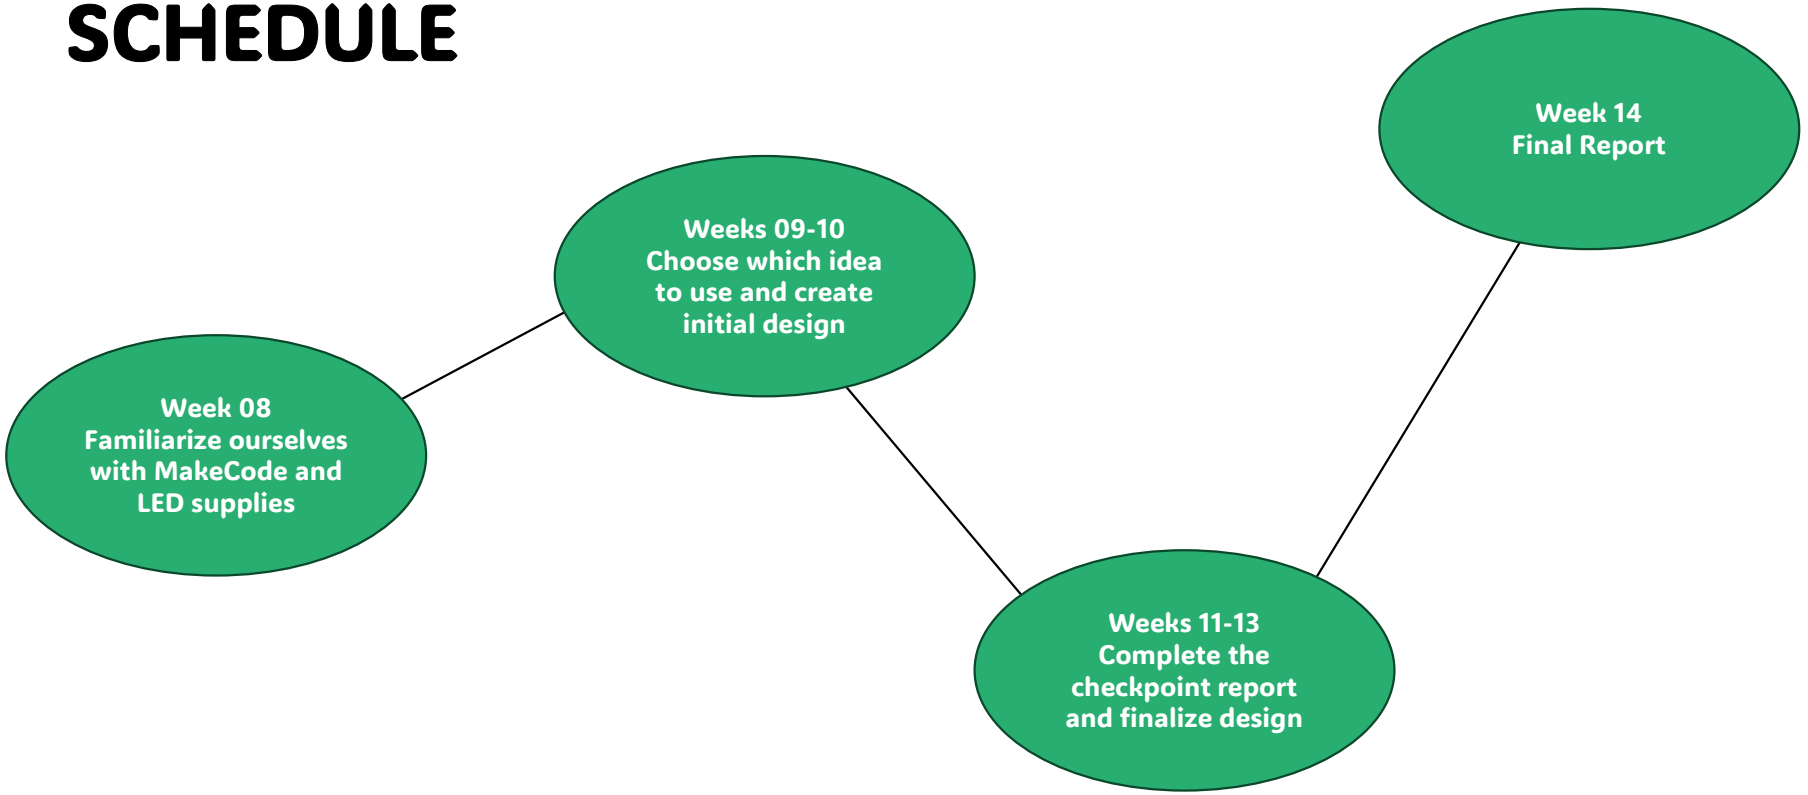

PLAN 1

Make the LED ring lights light up in a pendulum motion and gradually decrease the height until it rests at the bottom

PLAN 2

Make the LED ring lights have light slowly descend then settle at the bottom until they stack to the top

SCHEDULE

Week 08
Familiarize ourselves with MakeCode and LED supplies
Weeks 09-10
Choose which idea to use and create initial design
Weeks 11-13
Complete the checkpoint report and finalize design
Week 14
Final Report

BACKUP PROJECTS

2. GE Aerospace Turbofan Design

3. Water Filtration Design
